Venue:

Beaumonde On The Point
306 Riverside Dr
East Perth WA

Cost:

Complimentary

5 HOURS CPD

MEET THE SPEAKERS

Key topics of the day

Investing for the Future – Technology and Business Model Disruption

Stefan Marcionetti, Magellan Asset Management

The pace of technological advancements over the past decade are expected to be overshadowed by the speed of technological leaps over the next 10 years. These changes are all but certain to disrupt traditional business models such that there will be clear winners and losers. Investors must absorb the implications of these likely changes as they peer into the future. Hear how Magellan is navigating these challenges when it comes to its global portfolio that is designed to generate competitive returns while protecting capital in adverse markets.

AI – Artificial or Augmented Intelligence?

John Barrington, Alphaintell Pty Ltd

The idea of Artificial Intelligence has been around for 60 years but seems to come of age in the past 12 months. Not a single day passes without some mention of AI in the business or general press. Is it myth or reality? This session will explain the difference between artificial and augmented intelligence and how the latter is benefiting organisations in the retail, financial services, health and industrial sectors.

Cyber security – what next?

Michael Shatter, RSM

Cyber security is all the rage! However things are about to get a whole lot more exciting with the introduction of the Notifiable Data Breaches (“NDB”) scheme from 22 February 2018. This discussion will briefly revisit cyber challenges for organisations and then explore the impact of the NDB scheme and the question of what happens when you are breached. This part of the discussion will focus on useful information so that as management, an informed role can be taken on dealing with a breach.

Future of work – global trends impacting your business

Brodie McCulloch, Spacecubed

40% of the workforce will be comprised of millennials by 2020 and companies are preparing for 50% of their workforce to be on demand employees. How, where and when people work is changing faster than ever, along with the expectations from work. This parallels the need to reinvent your business and innovate at ever increasing speeds to keep up with global change. Brodie will explore these themes and what you can do to take advantage of this change through your workspaces, access to talent and embedding of innovation in your business.

How corporates can leverage blockchain technology

Leigh Travers, DigitalX

Blockchain technology is revolutionising the world of commerce and finance. The technology has key fundamental characteristics that allow institutions and businesses to reconstruct and enhance their current business models by increasing security and efficiency to stay competitive in today's market. DigitalX provide market leading solutions for companies looking to incorporate blockchain into their business. This can be done by introducing, partnering with, or incorporating an existing high quality blockchain solution, or designing and building unique custom technologies.

Training Martian MacGyvers

Josh Richards, Mars One

How do you pick and prepare a team for a one-way mission to Mars? Astronaut candidate Josh Richards shares what he's learned being shortlisted for the ultimate high performance team, why the fearless “right stuff” test pilots of the past are the last people we'll want on a Mars mission, how an “orbital perspective” and Richard Dean Anderson can help your business, and why we'll need a rock band on the red planet.

Future panel discussion

Facilitated by Josh Richards and accompanied by special guest speakers from throughout the day
